_EXPERIENCES

ICONA

Shanghai, China – Aug.2025 to Dec.2025
Design Internship at ICONA Design Group as
Automotive Designer intern.

DACIA x GRAVITY SKETCH

Paris, France – Mar.2024 to Jun.2024
Partnership project with Dacia and Gravity Sketch.

LIGIER

Paris, France – Mar.2024 to Jun.2024
Partnership project with Ligier.

AFRY

Gothenburg, Sweden – Nov.2023 to Feb.2024
Design Internship at Afry Experience Studios as
Automotive Designer intern.

EXTREME

Paris, France – Jun.2023 to Sept.2023
Design Internship at AdvanceDesign by Extreme as
Transportation Designer intern.

STRATE, SCHOOL OF DESIGN

Paris, France – Sept.2020 to Jan.2025
5th student in Transportation Design at Strate.

LYCEE LEONARD DE VINCI

Saint-Witz, France – Sept.2017 to Jun.2020
High School Economics and Social science
diploma (with honors)

_ABOUT ME

Design is a constant journey of discovery, driven by curiosity and a desire to learn from everything around me. I see each project as an opportunity to explore new ideas, challenge conventions, and grow through experimentation. For me, creating is about understanding the world better and finding ways to make it more inspiring and meaningful.

_SKILLS

LANGUAGES

French : Native
Portuguese : Native
English : Fluent
Spanish : Advanced
Vietnamese: Elementary level

HARD SKILLS

SKETCH
PHOTOSHOP
BLENDER
GRAVITY SKETCH (PROFESSIONAL CERTIFICATE)
ILLUSTRATOR
INDESIGN
VIZCOM (AI)
COMFYUI (AI)

SOFT SKILLS

Creative problem-solving
Team collaboration
Attention to detail
Proactive learning

Personal project

HONDA Acty.V

As an automotive designer, I wanted to revisit one of Honda's classic models—the Honda Acty. First introduced in the 1980s, the Acty became a beloved compact van in Japan, known for its practicality and versatility. For this project, I've updated the design of the Acty for 2025, maintaining the original charm and functionality while giving it a fresh, modern look. The goal was not to reinvent the wheel, but to breathe new life into the iconic van, ensuring it remains relevant for today's urban environments, with a focus on practical updates that cater to current needs. The result is a refined, timeless version of the Acty that stays true to its roots while offering a glimpse into Honda's future.

_CONCEPT

The **goal** of my project is to design a rescue vehicle that does not replace the helicopter, but rather **relieves** it by handling lower-priority emergencies.

The idea is to establish a five-level emergency scale, where levels 4 and 5 (life-threatening situations) remain the responsibility of the helicopter, while levels **1 to 3**, less critical but still urgent cases, can be managed by this **new vehicle**.

Smaller, lighter, and more **agile**, this vehicle is designed **for non-life-threatening interventions**, especially in hard-to-reach or remote areas where traditional ambulances cannot go, and where deploying a helicopter is not always justified.

_PROJECT CHOICE

_Use of VR at the beginning of the research phase

_01

*Rescue with a **scout** exoskeleton*

_02

*Rescue with a small **narrow** vehicle*

_03

*Rescue with an **eVTOL***

_PACKAGE

CycloTech est une entreprise autrichienne spécialisée dans le développement de solutions de propulsion avancées pour la mobilité aérienne urbaine et les véhicules volants nouvelle génération.

Les **CycloRotors** sont des rotors cycloïdaux à pales pivotantes permettant une poussée vectorielle instantanée dans toutes les directions, offrant ainsi une maniabilité exceptionnelle pour les eVTOLs et drones. Cette technologie compacte et silencieuse permet un vol précis, stable et adaptable, idéal pour des environnements urbains ou confinés.

DRAGONFLY is designed to land where helicopters usually can't.

Two rescuers retrieve the victim and quickly evacuate them to the hospital.
It's a fast, compact solution for non-critical emergencies in hard-to-reach areas.

Personal project

MINI Capsule

In response to the evolving urban landscape and the growing need for sustainable mobility solutions, I've envisioned a futuristic MINI for 2050—a fully autonomous taxi designed specifically for cities where personal vehicles may be banned. With the rise of shared transportation and the shift toward greener, more efficient solutions, this MINI taxi blends the iconic charm of the brand with cutting-edge technology. Its compact, agile design is perfect for navigating dense urban environments, while its autonomous capabilities and electric powertrain make it a sustainable alternative to traditional vehicles. This project is a vision for a future where public transport, taxis, and emergency vehicles are the only means of getting around—ensuring safe, convenient, and eco-friendly transportation for everyone.

1 week project

BMW Apex

The BMW Apex concept is a bold exploration of futuristic automotive design, created as a quick yet ambitious project completed in just one week. Blending cutting-edge aerodynamics with a striking aesthetic, the design features a unique cubic pattern transitioning from pristine white to deep violet, symbolizing innovation and evolution. Despite the rapid timeline, the BMW Apex pushes the boundaries of speed, technology, and luxury, embodying the essence of modern sports car design.

Done in one
evening.

I use **ComfyUI** as a tool for **ideation** and **rendering**, starting from sketches and exploring visual directions with full creative control.

Rather than relying on cloud-based AI tools like Midjourney, Vizcom or Krea, I prefer use LoRa from CivitAI or LibLib, or developing my own LoRA models and custom workflows locally on my machine.

This approach allows me to stay fully in control of the process, fine-tune results to match my design intent, and ensure everything remains private and self-hosted.

ONPOINT
Sketch rendering

Thanks for your time !

Currently looking for a Junior Exterior Designer position, available from January 2026.
